Cashlogy POS 1000
IT'S ABOUT YOUR BUSINESS

Automate the Control of your Cash… really!

Paying in cash is still the favorite way to pay by the majority of clients. The World Payments report confirms that Cash remains the favorite method of Payment. The majority of today's POS systems reply upon manual handling of cash payments using a cash drawer. At the 2011 NRF Loss Prevention Conference it was suggested that Retailers lose $34.5 billion per annum to theft or shrink. Shrinkage that is often caused by internal errors, employee theft or shoplifters.

Cashlogy, IT'S ABOUT YOUR MONEY

Cashlogy is perfect for a multitude of establishments: Restaurants, QuickServe, Supermarkets, Bakeries, Specialty Retail, Gas & C Stores, … It can work as a stand-alone point of sale or, thanks to its SW, in multi-point environments connected to up 3 POS.

Designed to offer unprecedented levels of integration:

- **Attended:** Cashier collects and inserts cash to Cashlogy and gets back the correct change to consumer.
- **Self-service:** Consumer pays directly at Cashlogy and gets back the change directly, without the intervention of the Cashier.
- **Split:** Divide Cashlogy in two separated payments, Consumer pays directly coins at the Cashlogy coin module and Cashier collects and inserts the high value notes to Cashlogy notes module.
