

SCAN COIN A3 Remittance Payment Kiosk

Sold by SCAN COIN

The SCAN COIN remittance payment kiosk is a self service payment machine through which a wide range of account payments can be made using coins, notes, credit/debit cards or cheques. The kiosk provides an effective solution for taking payments that cuts collection and administration costs while offering a better service to customers.

Convenient to use

The SCAN COIN Remittance Payment Kiosk helps you deliver a more cost effective service. Designed for ease of use, it provides simple and clear instructions and guidance to the user. It is totally self contained and secure and can therefore be sited where it is easily accessible for customers, meaning payments can be made outside office hours at a time and place that is more convenient for them. In return, local authorities can release valuable space and reduce the number of staff dedicated to payment collection who can then be used in other areas.

Better control

Automated transactions eliminate the possibility of fraud and give better audit information. Several kiosks in different locations can be easily managed by using the optional Saturn remote monitoring system. Using this monitoring system, management can check the status, contents and history of all kiosks on their network. This system can ensure the kiosks are always in service by giving advanced warning of low change, low paper roll or a full cashbox. Full details of all transactions can be clearly displayed to enable speedy resolution of any customer queries. The status of all devices in the kiosk is shown in simple icons so that any fault can be quickly diagnosed.

Easy to operate

A colour touch screen display is used for selecting the required payment option from the on-screen menu and for inputting the requested information. The kiosk can also read the customer's account card or scan the barcode on a bill, so that only the amount to pay needs to be

entered before making a payment. Multiple language options are also available to ensure easy access to all customers. The display can be customised to reflect an organisations branding and accommodate individual requirements. It can also be modified by the operator as needs change or additional services are added.

Secure payments

When notes are fed into the machine they are checked by a sophisticated note validator and are then deposited into a 1200 capacity secure note cassette. Coins are checked by a high security coin acceptor and deposited in a secure coin bag. Four high capacity hoppers allow for up to four different denomination coins to be dispensed. The availability of change enhances the service and is always welcomed by customers. When payment by credit and debit card is required, an integrated Chip & Pin keypad is fitted which uses a fully accredited system to authorise transactions via a secure and reliable Electronic Funds Transfer (EFT) provider. The system is PCI DSS compliant and is kept up to date with any changes in legislation and security requirements.

TECHNICAL SPECIFICATIONS

WIDTH	670mm
DEPTH	400mm
HEIGHT	1350mm
WEIGHT	115Kg
SECURITY	2mm all steel cabinet, seven point locking system

FEATURES

15IN XVGA TOUCH SCREEN FOR MAXIMUM FLEXIBILITY
